Solution Architect LatAm - IC

Chubb is looking for an IT Architect with Solution Architecture experience to join our regional IT Architecture team to support adoption and onboarding of new technologies and new distribution partners, leading the design activities within conceptualization and initialization phases and supporting project execution. As part of the role, will be responsible for solution architecture design, application roadmap and cloud migration / modernization for the designated portfolio and will act as a single point of contact between the local leadership and regional / global architecture as required. The candidate will be responsible for identifying and prioritizing activities to support onboarding of third parties on Chubb standards, coaching them from a technical perspective and supporting the execution of POCs on specific features required from a security / availability perspective. The architect will report to one of our lead architects and will be working with teams across LatAm on a day to day basis.

This person should have a passion to learn, understand and apply architectural design patterns for modern environments, while learning how to manage and prioritize technology decisions over a portfolio of applications and drive modernization initiatives. The candidate will also support improve adoption of standard EA Frameworks and best practices such as Domain Driven Design and define KPIs for the programs under his / her responsibility. The individual will be accountable for the completion and validation of solution design artifacts.

In this role, you will:

Define architecture frameworks, reference architectures and specific solution architectures

Coach and coordinate activities with our distributor partners, vendors and internal teams

Work closely with operation and business teams to help understand business needs, prioritize and transforming them into IT deliverables

Lead design, execution and documentation of Proof of Concepts for new technologies

Execute code reviews and follow up on recommendations

Support identification and development of best practices / guidelines for IT architecture in LatAm,

Research on alternatives scenarios to design high level architecture solutions

Solution design and documentation within Chubb standards, including Archimate

Support detailed analysis activities on systems of records, digital technologies, cloud adoption and DevSecOps implementation.

Enhance Chubb's KPIs and reporting methods for Enterprise Architecture

Qualifications

Education: Bachelor's / Engineering IT Degree

Field of Study: IT

Language: Spanish, English

Level: High level on English, ability to interact in video conferences and produce written material

General experience: Previous experience implementing security

Working experience within retail or financial services industries.

Experience in role: +2y

Proficiency of at least one modern tech stack (Java Spring Boot, Quarkus or modern .Net preferred), being able to do code reviews and recommend patterns.

Experience with banking or payment processing systems is a plus

Understanding of secure coding practices and security implications on solution design

Solid understanding of Software Engineering patterns and application in refactoring scenarios

Experience in B2B integration patterns (batch and online), including SSO patterns

Experience in cloud environments with PaaS solutions (Azure preferred)

High level understanding of architecture modeling / concepts

Experience evaluating / comparing technologies / products using both functional and non-functional requirements

Working knowledge of Kubernetes and other containerization solutions

Highly organized, possessing strong analytical abilities

Excellent written/verbal skills

Working knowledge of Excel, PowerPoint and Word required.

Ability to interact well with various levels of the organization

Ability to quickly learn project processes and their incorporation into the tools utilized.

Orientation toward details
