

Sr Estimator - RNG - Renewable Natural Gas

[Apply Now](#)

Company: Honeywell

Location: Mexico City

Category: architecture-and-engineering

Responsibilities

Analysis and evaluation of process and / or project definitions, descriptions and requirement profiles of specific situations

Analysis and evaluation of tender documents, specifications, market information and application-specific parameters

Feasibility study, based on the field of application, considered existing solutions and solutions to be developed

Creating a solution concept

Development of a solid, valid and valuable technical and commercial concept based on the requirement profile of the customer / the market

Development of studies on design, functionality, handling and existing process equipment

Definition of components and assemblies

Defining and specifying subgroups and elements as implementation of the solution concept, division into common segments

Creation and development of technical specifications and design documents for further

internal / external design and processing, based on the overall concept

Handover of the elaborations including communication to internal and external parties

Creation and validation of commercial overviews of the overall concept

Development of a commercial concept, depending on the required level of details, in relation on the chosen solution

Economic determination of the profit and loss curve of the overall concept as well as a part of a detailed overview of the distribution of costs over course and share

Implementation and coordination of internal approval processes

Compiling and presenting the overall concept in a technical and commercial overview

Coordination of internal divisions and supporting functions as legwork to the overall concept

Transfer of necessary information of the overall concept in a process conform format to reach the final approval

Process the online DRF/SFDC/CPQ approval system

Travelling and Travel Time: Less than 20%

Based in Mexico or in Colombia

YOU MUST HAVE

Chemical / Mechanical Engineering/Instrumentation Degree from University with a focus on a technical field

Knowledge of the relevant regulations, depending on the application region (ISO / EN / BS / ASME / VDE / DVGW / AGA 9, AGA 3, AGA7, API 1104, D1.1...)

Knowledge on P & I and G A Drawings.

Knowledge of procedural and / or process engineering in the relevant occupational field

Firm understanding of materials, gas composition, analyzers, transmitters, pipe

schedules and yields, max allowed operating pressure of pipe and how temperature effects it, functionality of valves and when and where they used, fire and safety (transmitters detectors and visual devices, electrical classification areas Class 1 Division 1, Division 2, general purpose, CSA, UL, Inmetro Brazil, National Electrical Code NEC, national building code, US state regulation and requirements on buildings, Knowledge about process engineering and installation of plants or structures

Relevant work experience in proposal and estimating.

English, Minimum Level C1 in speaking and writing.

WE VALUE

Preferable familiar to our 1st party product, Metering and Regulating skid system.

Preferable familiar to 3rd party product like Analyzer system, Isolation Valve, Flow Control Valve, Heat Exchanger, Boiler System, Pressure Vessel / Filter, Pump, and etc.

Professional experience in the sector of oil / natural gas / liquefied gas / New Energy / Biomethane / Hydrogen / process engineering

Relevant work experience in a technical field of mechanical engineering, process or control and design engineering

Reliable user knowledge in relevant office and data processing programs (MS Word, Excel, PowerPoint, Outlook)

Knowledge in handling CAD / construction programs

Open and team-oriented manners as well as behavior

Direct and target-orientated communication skills

Independent organization and structuring of own processes

Permanent self-control and verification of own results
